

## Quick Adjust Spring Clips

**#70222, #70225, #70227 & #70228 - most Assoc., HPI & Kyosho Shocks**  
**#70322, #70325, #70327 & #70328 - most Traxxas, Losi & HPI Savage Shocks**

**Before You Begin:** Take note of your exact ride height and current spring pre-load settings.

**Traxxas Shocks:** Use your stock Traxxas top ring and simply replace your stock clips with your new **RPM** Spring Clips!

**Associated, HPI & Kyosho Shocks:** If your stock shocks already use spring clips, simply replace the stock clips with your new **RPM** clips. However, you may want to install our top ring to prevent the spring from rubbing on the shock body.

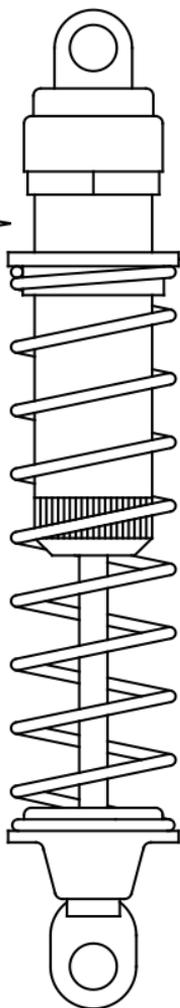

- Remove the screw holding the bottom of your shock to the a-arm.
- Next, remove the spring cup, shock spring, and shock collar or stock top ring.
- Install the **RPM** top ring with the smaller, thin diameter on top of your shock spring and then slide the spring back onto the shock body.
- Reinstall the spring cup and screw the shock to the a-arm.
- Slide the top ring down and install your new shock clips until the original ride height and spring pre-load are reestablished.

**Losi Shocks:** (using stock spring collars held in place with a screw):

- Remove the shock from the vehicle and remove the spring cup, spring, and spring collar.
- Trim the lower ring (see drawing on reverse) off of the stock spring collar using an X-Acto knife or dremel tool.
- Reinstall the stock spring collar on the shock body as close to the top of the shock as possible. Be absolutely sure that this collar is placed identically on each pair (front and rear) of shocks for identical pre-load adjustments.
- Place your new **RPM** top ring with the smaller, thin diameter on top of your shock spring and then slide the spring back onto the shock body.
- Reinstall the spring cup and remount the shock on the vehicle.
- Finally, slide the spring down slightly and install your new spring clips over the shock body. Add clips until the original ride height and spring pre-load are reestablished.

For the ultimate finishing touch, try mixing and matching these spring clips with our colored spring cups **#73152** - Black, **#73155** - Blue, **#73157** - Yellow & **#73158** - Purple!
