

#70462 & #70582 - ECX Torment, Ruckus & Circuit A-arms

What's Included: #70462: 1 - left rear A-arm, 1 - right rear A-arm & 2 - 6-32 x 1/8" Phillips Screws. #70582: 1 - left front A-arm, 1 - right front A-arm & 2 - 6-32 x 1/8" Phillips Screws.

Installation: *RPM* A-arms are stock replacement parts. Simply remove your stock A-arms and replace with your new *RPM* versions. The only difference is in the outer hinge pin screw retainer. *RPM* A-arms use an in-line screw that threads in behind the outer hinge pin. Take a look at the outer hinge pin hole in your *RPM* a-arms. One side has a larger hole than the other. Slip your stock hinge pin in through the larger hole, then thread the included 6-32 x 1/8" screw in after the hinge pin. **Caution:** *Do not thread this screw in from the side of the smaller hole!* **Caution:** *Do not overtighten this screw.* There is no force on the screw that would

cause it to come out. Tighten until the head of the screw just touches the A-arm, then stop.
