

#70452 / #70472 - RPM Front and Rear A-arms for the Axial EXO Terra Buggy

Installation Note: Unlike stock A-arms, the outer hinge pin on both front and rear A-arms can only be inserted into **RPM** A-arms from one side. Slip the hinge pin through the larger of the two holes and make sure the hinge pin slides all the way in to the shoulder of the opposite side. The hinge pin will not sit flush to the outside of the A-arm like a stock version. Hinge pins must slip all the way in to the shoulder and be locked in place with the carrier setscrew. Hinge pins that break out of an **RPM** A-arm due to improper positioning will void the **RPM** warranty on these a-arms.
