

## #81972 - Front Bumper and Skid Plate for the HPI Baja 5B

**What's Included:** 1 - Front Skid Plate, 1 - Front Bumper, 3 - M4 x 14mm Flathead Screws, 3 - 4mm Locknuts, 2 - M5 x 20mm Flathead Screws

**Before You Begin:** The **RPM** Front Bumper and Skid Plate does not connect to the stock HPI #85420 bumper loop, allowing you the option of removing this piece or leave it installed, using the stock clips to hold it in place. Remove the stock skid plate from the buggy, retaining the two 5mm screws for use with the **RPM** skid plate. The other screws holding the skid plate to the HPI #85420 bumper loop may be discarded. Remove and discard the two 5mm screws exposed when the stock skid plate is removed. They will be replaced with longer 20mm screws in this kit.

**Installation:** Attach the **RPM** Front Bumper to the **RPM** Skid Plate using the three included M4 x 14mm flathead screws and 4mm locknuts. Attach the bumper / skid plate assembly to the front end of the buggy using the two stock 5mm screws removed earlier through the front two holes of the **RPM** skid plate. The rear two mounting holes will use the new M5 x 20mm flathead screws included with this kit.
