

□ **#70510 - Threaded Hinge Pins for the Traxxas X-Maxx**

□ **GS025 Replacement:** Please note, *RPM* replacement hinge pins use a smaller M3 lock nut, versus the stock M4 locknut that comes with the CEN #GS025. If the *RPM* locknut is too small for your application, a small 3mm washer may be used (not included). □

When used with the Traxxas X-Maxx: Some minor modification is required for *RPM* Threaded Hinge Pins to work with either stock Traxxas or *RPM* A-arms. Using a #22 drill (4mm), carefully remove the small shoulder in the outer hinge pin hole, opposite the hinge pin retaining screw in the A-arm. This slight modification, when done properly, will not void the warranty on your *RPM* A-arms.
